EDUCATION

Undergraduate BS(Hons) in Cyber Security

Sri Lanka Institute of Information Technology

G.C.E A/L

Sri Naga National School

SKILLS

- **Technical Skills:**

Python | Java | C | HTML | CSS |
JavaScript | Networking | Linux

- **Cybersecurity Skills:**

Ethical Hacking | Vulnerability
Assessment | Penetration Testing
Basics | Network Security

- **Tools & Technologies:**

Wireshark | Nmap | Git | Linux
Terminal | VS Code

- **Soft Skills:**

Problem Solving | Teamwork |
Communication | Analytical
Thinking

Dedicated Cybersecurity undergraduate with a strong passion for ethical hacking, vulnerability assessment, and secure system development. Experienced in building machine learning-based security tools and vulnerability scanners. Continuously improving hands-on skills in penetration testing, network security, and threat detection to contribute to real-world cybersecurity solutions.

PROJECTS

Secure tcp client-server system

technologies: c, socket programming, Linux

- Developed a secure tcp-based client-server application
- Implemented authentication and encryption concepts
- Managed multiple client connections using process handling

Web-based advertising management system

technologies: html, CSS, javascript, php (file handling)

- Built a system where users can create campaigns and ads
- Implemented payment validation and admin approval system
- Designed front-end and handled backend logic without database

T-chat (real-time chat application)

technologies: java / networking / socket programming

- Developed a real-time messaging application using client-server architecture
- Implemented communication over network sockets
- Demonstrated understanding of networking concepts and protocols

Web Vulnerability Scanner

Technologies: Python, Web Security, HTTP Requests

- Built a scanner to detect common web vulnerabilities
- Tested for issues such as insecure endpoints and input validation flaws
- Assisted in identifying potential attack vectors in web applications

CERTIFICATIONS

AI/ML ENGINEER - STAGE 1

Centre for Open and Distance
Education – SLIIT

Issued: 22 July 2025

Introduction to programming using python

HackerRank

Issued: March 2026

Java Programming

Great Learning

Issued: Aug 2024

Generative AI

Great Learning

Issued: September 2024

Introduction to Cybersecurity

Cisco

Issued: March 2026

Phishing URL Detection System (Machine Learning)

Technologies: Python, Scikit-learn, Pandas, Flask

- Developed a machine learning model to classify URLs as phishing or legitimate
- Used feature extraction techniques on URL structures (length, symbols, patterns)
- Implemented classification algorithms to improve detection accuracy

Advanced Vulnerability Scanner

Technologies: Python, Networking, Security Testing

- Developed an advanced tool to scan systems/websites for vulnerabilities
- Identified security weaknesses such as open ports and misconfigurations
- Automated scanning process to improve efficiency in penetration testing

EXTRA-CURRICULAR ACTIVITIES

- Founder of RootRecon Cybersecurity Platform
- Active learner in ethical hacking and cybersecurity research
- Engaging in cybersecurity content creation and awareness
